## Comprehensive Training Geared to Meet Your Organizational Needs

Education plays a key role in maximizing the value of an organization's investment. BakBone Educational Services provides cost-effective, comprehensive technical training and certification courses that maximize the benefits of BakBone products for your organization. Our suite of learning offerings ensures you implement best practices that will speed implementation, administration and use of BakBone products.

Our Certified Administrator Program acknowledges its members (customers, employers, and colleagues) as highly skilled users of the our NetVault: Backup product by demonstrating proficiency in installing, operating, and troubleshooting NetVault: Backup in an end-user environment.

### NetVault: Backup Implementation and Administration

#### Course Duration: 2 Days

This instructor-led course provides participants a solid understanding of NetVault: Backup installation and configuration, including NetVault: SmartDisk, within a Linux or Windows environment. This course combines an introduction to key concepts and practice of newly acquired skills through hands-on labs. Participants must attend the class in its entirety and pass the respective certification exam to successfully complete this certification.

### NetVault: Backup Optimization and Customization

#### Course Duration: 2 Days

This instructor-led course builds upon the knowledge students have gained in the NetVault: Backup Implementation and Administration training. Hands-on practice is an integral part of learning and this course offers extensive hands-on opportunities for students to understand advanced functionality of NetVault: Backup. In addition, participants will solve complex data protection challenges and strategies in a variety of environments. Participants must attend the class in its entirety and successfully pass the certification exam to complete this certification.

### NetVault: Backup 4 Hour Online Training (Webinar)

#### Course Duration: 4 hours

Delivered using web conferencing technology, this live online course demonstrates how to properly install and configure NetVault: Backup for either Windows, Linux/UNIX or Mac OSX platforms. Participants are instructed in basic steps to installing and configuring NetVault: SmartDisk in addition to considerations related to backup strategy. Best practices for creation and running backup and restore jobs are also discussed.

## About BakBone

BakBone Software is the leader in Universal Data Management. This provides a data-centric approach to integrating data protection, centralizing policy management and managing organizations' messaging infrastructure to optimize performance, increase data availability and improve corporate compliance.
